PARAPROJECT®
TROLLEY i32 for iPad®

Charging, synchronisation and storage station for up to 32 iPads for generations 2, 3, 4 and mini.

The PARAPROJECT® TROLLEY i32 combines ergonomic design, functionality and device protection in a versatile storage solution for tablets.

Perfect for the education sector, medical technology and industrial applications, such as sales, presentations, exhibitions / rental stations, logistics / inventory management, etc.

Key features:
Secure storage and centralised recharging for up to 32 iPads
Solid construction made of metal and plastic materials
The retractable and lockable door protects against access and, when open, offers more space in a small area.
32 x vertical slots, each for an iPad, including cover up to max. 18 mm, expandable up to a max. 25 mm if the separation pads are removed
To charge or synchronise simply slide the iPad inside and connect with the short MFI certified cable, included.
Free choice of connector
The Paraproject Trolley i32 supports and combines both the 30-pin connector and the Lightning connector.
Automatic synchronisation
Recognises the USB connection to the host computer and starts the sync process. (Can be adjusted, depending on the software used or the default settings). Wireless synchronisation is also possible in a Wi-Fi environment.
PARAPROJECT® TROLLEY i32

**Features:**
1. Ventilation at the front and back for optimal air circulation
2. Retractable swing doors for more free space when removing devices
3. Closure design for padlocks (Combination or key)
4. Lockable compartment for Access Point, connection to AirPort Express/Extreme
5. LEDs on the top indicate the charging status for each iPad
6. Laser engraved numbered and padded compartments, storage system supports the management of the iPads
7. Extra lockable drawer for MacBook, Apple TV and accessories
8. Firm worktop for use of notebook, printer, projector or document camera on the trolley
9. Low noise casters (12 cm diameter), two with locking brake for safe handling
10. Network connector, power switch and power supply
11. Lockable technical compartment for easy swapping of iPad cables

There are many ways to synchronise several iOS devices with a standard software. For this reason, the Paraproject® Cube does not include any special software. We can help you select the right software or recommend a contact to an Apple Premium Reseller. Here are three simplified examples of synchronisation:

1. Easy: iTunes software. With iTunes, it is recommended to only sync on a Mac OS operating system. iTunes installed on a PC system has a limit to the number of visible and manageable devices (about 10).
2. Advanced: The Apple Configurator app software, available only through the Mac App Store, can manage up to 30 devices. This is available through Apple’s Volume Purchase Program for Apps.
3. Expert: An MDM Software (Mobile Device Management) from Apple or other vendors such as Absolute® Manage, MobileIron® or MobiControl®, enables administration via a server and push functions through a Mac or PC infrastructure. Authorisation for VPN Access, IT security policies, in-house apps and App Store software distribution, as well as other content can in this way be set and managed.
